The 2018 SEDA focus on Poland

Includes comparison with EU and ROW

JULY 2018

Executive Summary Intro to SEDA SEDA 2018 analysis focusing on Poland Overview of SEDA results Ten year view of Poland Ten year view of Poland vs. Peers

Poland

32nd/152 Current Level 2018 rank (2009: 42nd/152)

Good and improving well-being performance

Over the last decade (slides 11-22), Poland...

- Improved in most dimensions, most notably in infrastructure, employment, environment and income
- Has a wealth to wellbeing coefficient of 1.22 in 2018, which is well above the global average and several of its EU peers

Compared to the EU, (slides 27-31), Poland...

- Performs better in the dimensions of economic stability, employment and education, but lags behind in other dimensions
- Has made stronger relative progress across most dimensions in the past decade, particularly in employment
- Has made slightly weaker relative progress in the dimension of education

Compared to the rest of the world (slides 32-36), Poland...

- Performs better in most dimensions and is pushing ahead in income, infrastructure, civil society and health
- Has made weaker relative progress in education, equality, governance and economic stability over the last decade

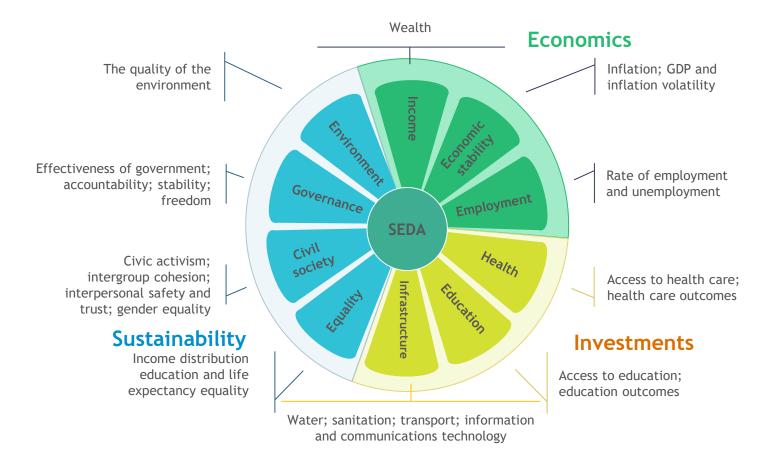

Poland has made significant improvements across the

 dimensions of well-being in the past decade and is a top performer in its ability to convert wealth into wellbeing

Intro to SEDA

SEDA Assesses Relative Well-being In Three Dimensions Comprised of 10 Dimensions

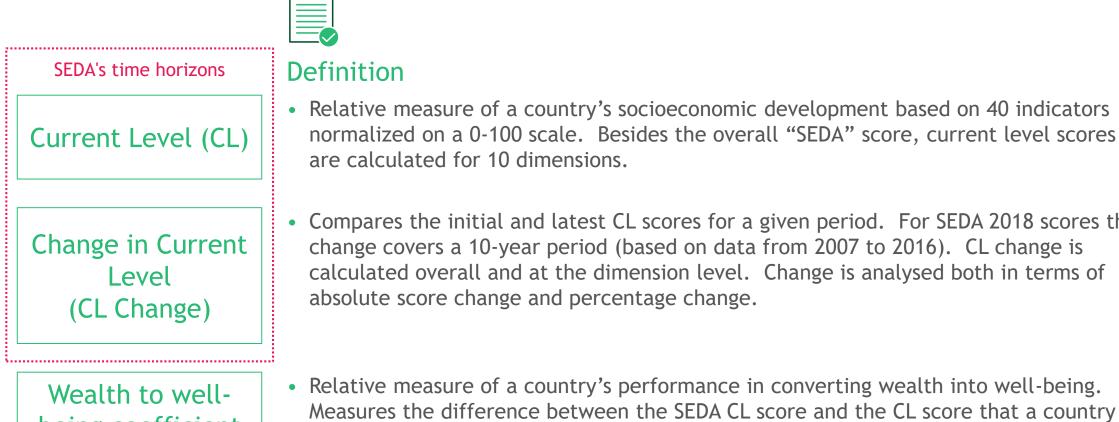

Copyright \otimes 2018 by The Boston Consulting Group, Inc. All rights reserved.

SEDA dimensions use 40 indicators - chosen to best characterize the dimensions without overlaps and capture differences across countries

Economics	Income	• GDP per capita, purchasing-power parity (current international \$)	
	Economic stability	 Inflation GDP growth volatility 	Inflation volatility
	Employment	Unemployment rate	Employment rate, population aged 15-64
	Health	 Number of physicians per 1,000 people Life expectancy at birth Prevalence of HIV Prevalence of undernourishment/obesity 	 Number of hospital beds per 1,000 people Mortality rate, under age 5 Incidence of tuberculosis per 100,000 people Immunization rates for DPT¹
SEDA Investments	Education	 School enrolment, tertiary (%) Teacher-to-pupil ratio, primary 	 Years of schooling, primary to tertiary Average of PISA math and science scores²
	Infrastructure	 % of population with access to water source Quality of road network Quality of electricity supply Number of mobile cellular subscriptions per 100 people 	 % of population with access to sanitation Quality of railroad infrastructure Number of internet users per 100 people
Sustainability	Equality	Gini indexInequality in education	 Inequality in life expectancy For 2018's installment, the Equality dimension was revamped and made more robust with the inclusion of the Inequality in Education and Inequality in Life
	- Equality - Ucivil society	Level of civic activismIntergroup cohesion	Interpersonal safety and trust Gender equity
	Governance	 Control of corruption and Rule of law indicator Political stability and absence of violence and terrorism 	Voice and accountabilityProperty rights
	– Environment	 Air pollution, effects on human health % of territorial area protected 	 Carbon dioxide intensity % of electricity generated from renewable sources

SEDA facilitates analysis of well-being in three different ways

- Compares the initial and latest CL scores for a given period. For SEDA 2018 scores the change covers a 10-year period (based on data from 2007 to 2016). CL change is calculated overall and at the dimension level. Change is analysed both in terms of absolute score change and percentage change.
- being coefficient (WWBc)
- Relative measure of a country's performance in converting wealth into well-being. Measures the difference between the SEDA CL score and the CL score that a country would be expected to have given its per capita income and the global average (coefficient = 1.0) relationship between income and CL score.

SEDA is a powerful way to asses and develop policies to increase a country's wellbeing Every government's ultimate customers are its citizens - the individuals for whom a country's socio-economic state needs to translate to tangible wellbeing benefits

GDP cannot offer an adequate view on wellbeing, SEDA does, as it goes beyond economic indicators

Since 2012, BCG has developed SEDA to support public policy makers, development organizations and other strategic decision makers make well-informed decisions to maximize citizen's well-being

SEDA proposes a relative measure of well-being based on three elements — Economic, Investments, and Sustainability — that encompass 10 dimensions, represented by 40 publically available indicators

SEDA offers a current snapshot of well-being, a measure of progress over time, and additionally it tells how well a country converts its wealth into well-being relative to other countries providing a robust assessment on strengths and weaknesses

Methodologically consistent SEDA scores and coefficients were calculated with 10 years worth of data for the 2018 report - the indicators used were chosen to best characterize the dimensions without overlaps and capture differences across countries

- In the 2018 installment, the Equality dimension was made more robust with the inclusion of the Inequality in Education and Inequality in Life Expectancy indicators
- SEDA doesn't include subjective indicators but the strong correlation with the World Happiness Index suggests that improvements in SEDA well-being scores are reflected in subjective indexes

Analyses are based on all 152 countries although charts usually highlight the Global Powerhouses - 36 countries comprised of 25 biggest economies and 25 most populous countries - representing 87% of the world's economy and 78% of the world's population? SEDA was developed to help public sector stakeholders develop actionable socioeconomic dev. strategies

SEDA

An approach to assess and compare each country's levels of socio-economic development across a broad range of dimensions

Assessment

Assesses how well countries are translating their wealth into Well-being

• Compares SEDA scoring with countries' GDP level

Provides a benchmark for countries to compare themselves against their peers

Ability do deep dive across 10 dimensions of development

• e.g. Health, Infrastructure, Government, Institutions...

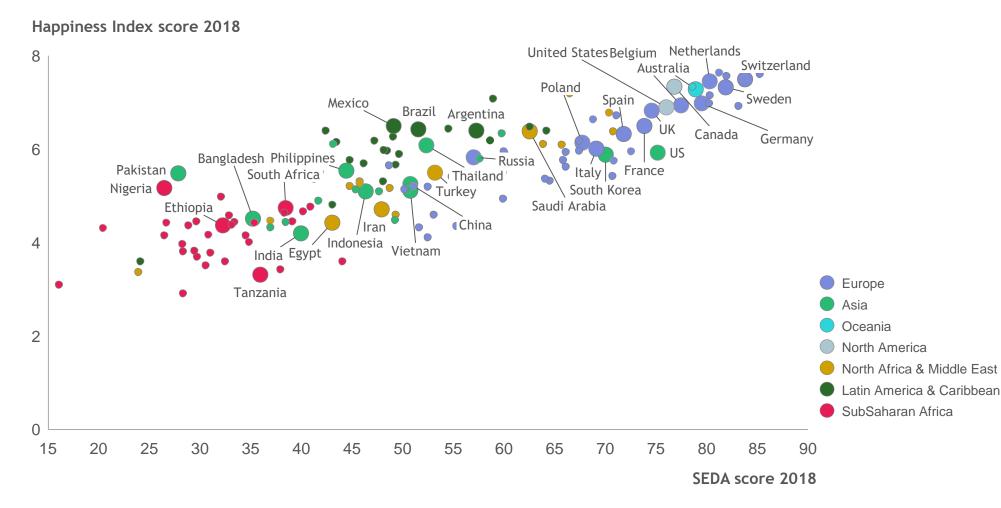

Provides valuable insight for governments, public policy makers, development organizations and international corporations with global presence

 $\mathbf{r} =$

M T

SEDA does not use subjective indicators but SEDA scores are broadly in line with subjective-based measures such as the Happiness Index

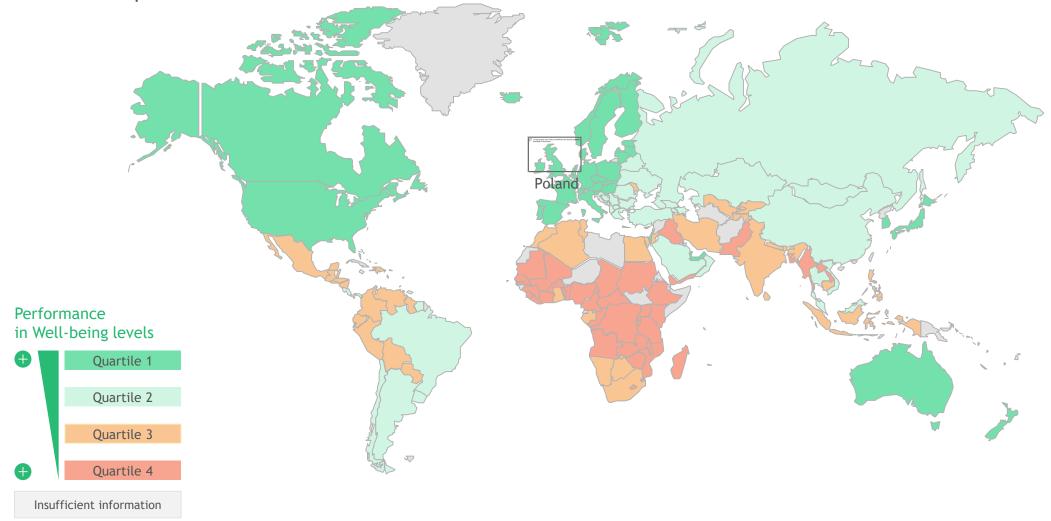

Note: The named countries constitute the 36 countries in our subset with the largest populations (top 25) and/or the largest economies (top 25); larger bubble sizes are Global powerhouses, smaller bubble sizes are rest of the world

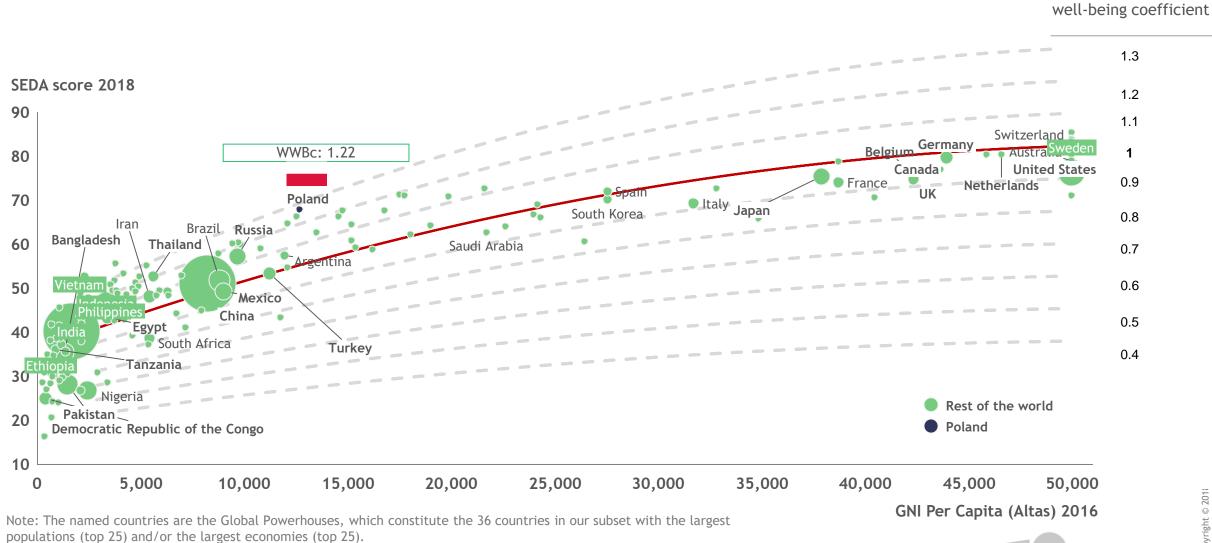

SEDA 2018 analysis focus on Poland

Wealthier countries show higher well-being levels

Poland is in quartile 1 of SEDA 2018

Poland is above average at converting wealth into well - being

Evolution of overall rank of Poland and select peers

Poland is a top performer when it comes to converting wealth into wellbeing amongst its select EU peers

Evolution of Wealth to Well-being coefficient of Poland and select peers

1. WWBc measures the difference between the SEDA CL score that a country would be expected to have given its per capita income and the global average (coefficient = 1.0) relationship between income and CL score Source: SEDA results 2018

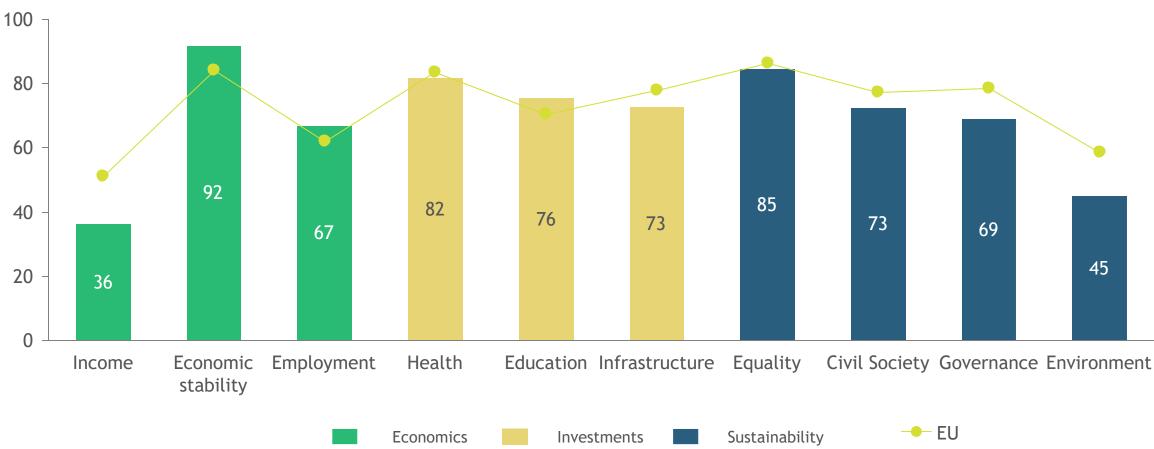

10 years view of Poland vs. EU

Poland performs better than the EU in dimensions of economic stability, employment and education, but lags behind in other dimensions

Current Level SEDA scores by dimensions

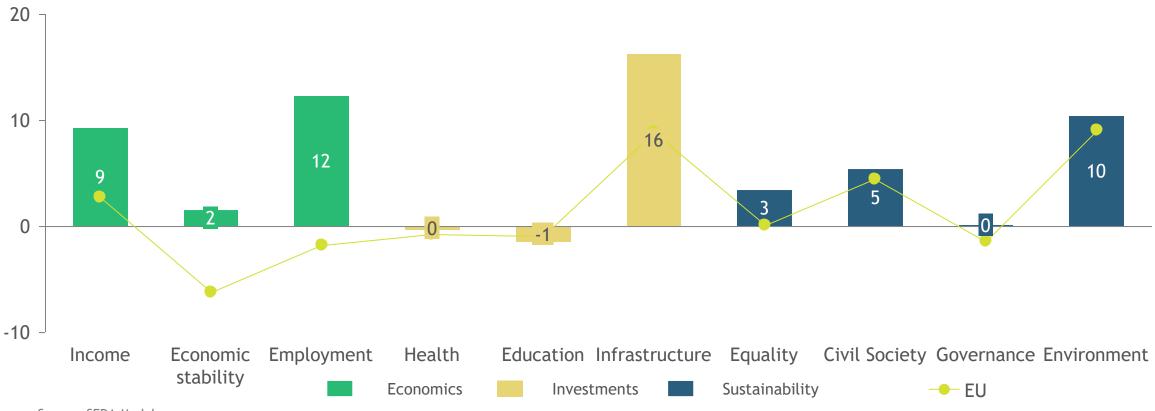

2018 Current Level

Poland vs EU

Compared to its EU peers, Poland is making stronger progress across most dimensions, particularly employment

Delta CL change by dimensions (in absolute score) Change in Current level score (2009-2018)

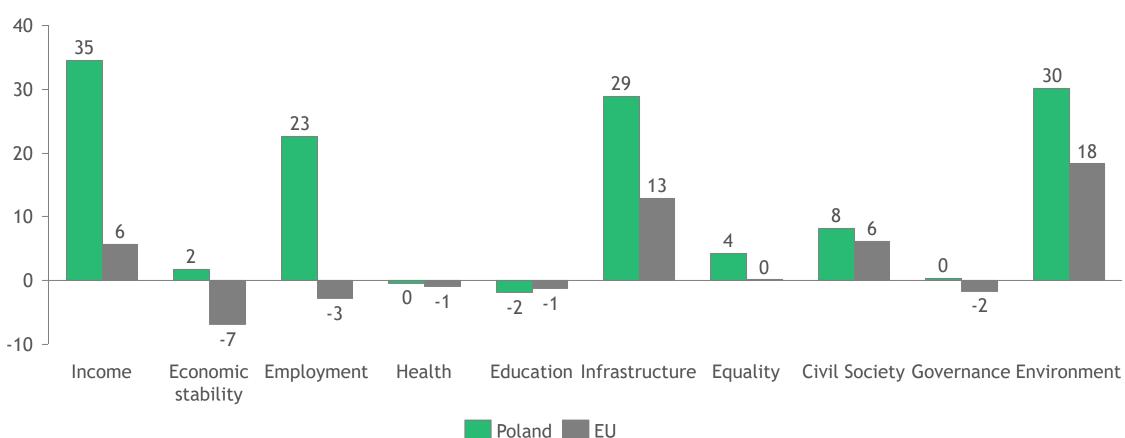

29

Poland vs EU

In percentage change terms, Poland is making considerably stronger progress in income and employment, but is slightly lagging in education progress

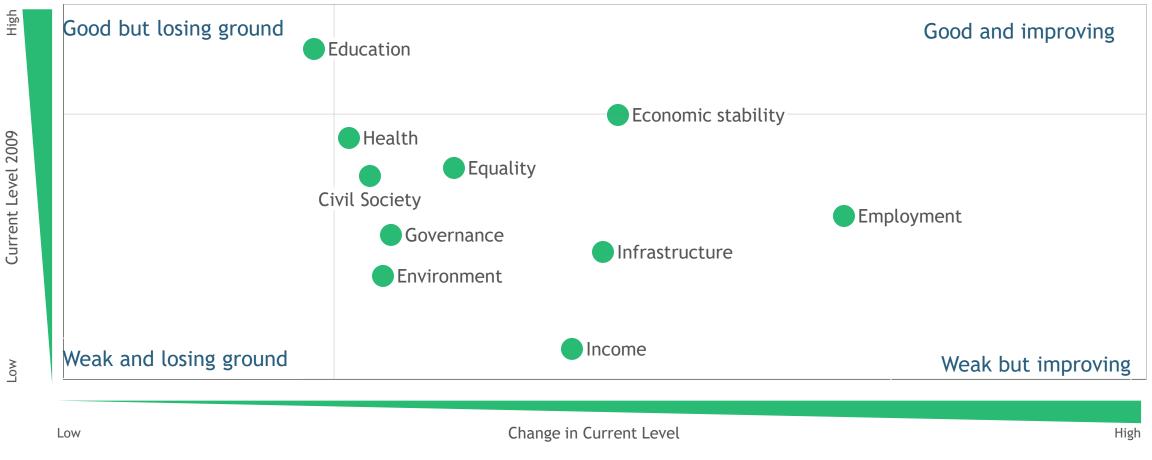

Delta CL % change by dimensions CL Score % change (2009-2018)

30

Poland vs EU

Compared to the rest of the EU, Poland is improving in most dimensions, but is slightly losing ground in education

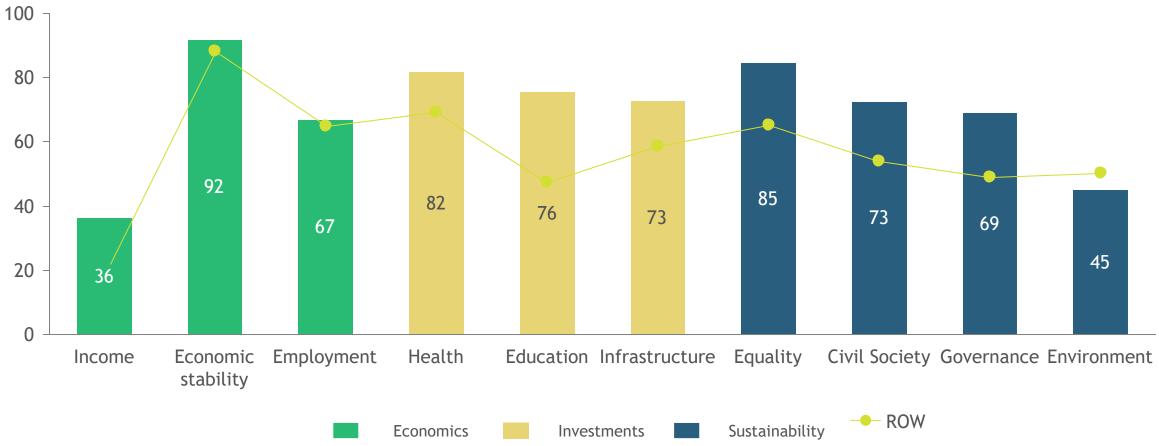

10 years view of Poland vs ROW

Poland performs better than ROW in all dimensions, except environment

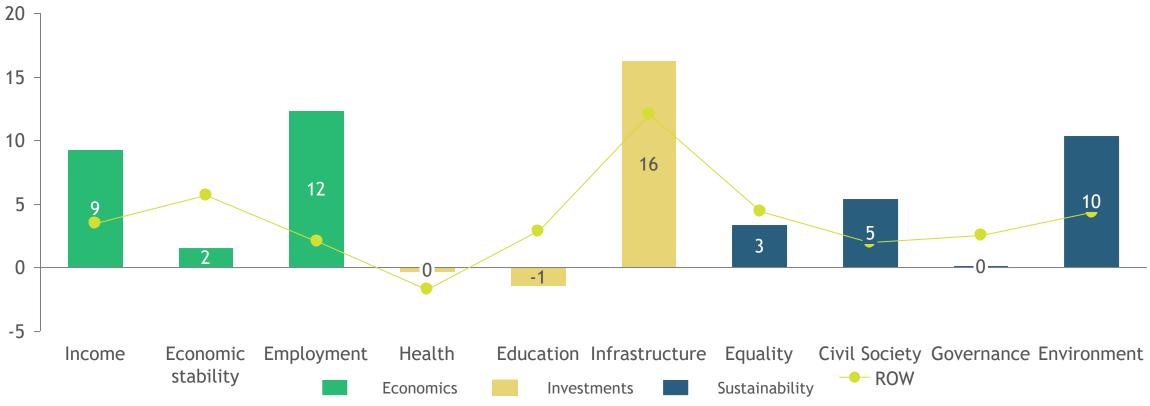

Current Level SEDA scores by dimensions 2018 Current Level

Poland vs ROW

Compared to the ROW, Poland is making stronger progress in several dimensions, most notably in income, employment, infra, civil society and environment

Delta CL change by dimensions (in absolute score) Change in Current level score (2009-2018)

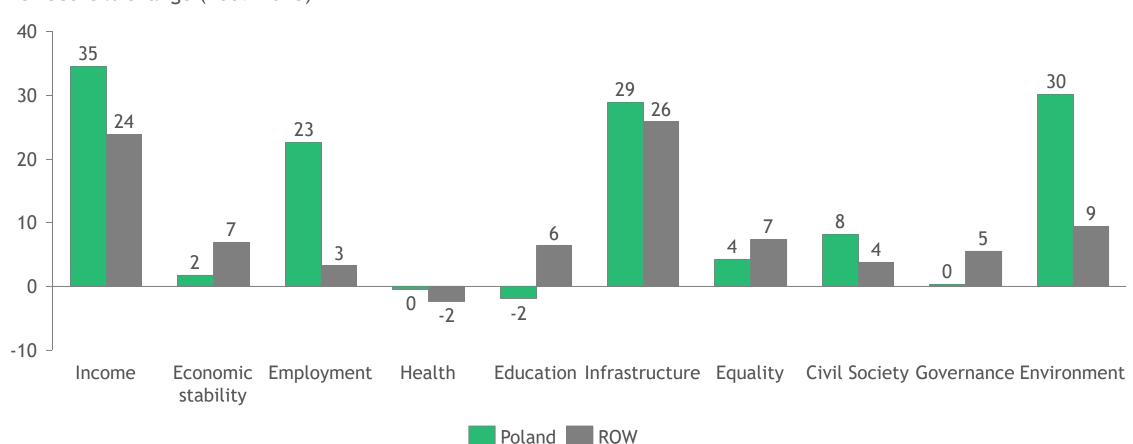

34

Poland vs ROW

In percentage change terms, Poland is making considerably stronger progress in employment, but lagging in econ stability, education and governance progress

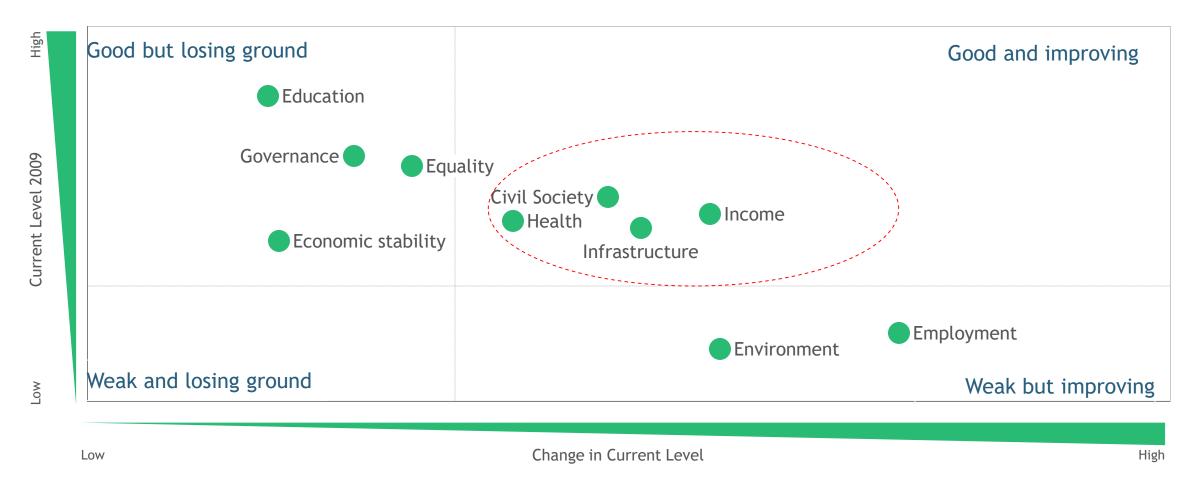

Delta CL % change by dimensions CL Score % change (2009-2018)

35

Poland vs ROW

Compared to ROW, Poland is pushing ahead in income, infrastructure, civil society and health

List of indicator Values for selected country

Dimension	Indicator	2018	2009
Income	GDP per capita, PPP (current international \$)	27,811	19,266
Economic Stability	Inflation, average consumer prices (percentage change)	1.91	3.45
Economic Stability	Inflation volatility (sdev)	1.90	2.58
Economic Stability	GDP growth volatility (sdev)	0.01	0.01
Employment	Unemployment, total (% of total labor force)	5.10	8.20
Employment	Employment rate, population aged 15-64 (%)	65.68	60.15
Equality	GINI index (1 to 100)	32.10	33.60
Civil Society	Level of civic activism (0-1)	0.55	0.54
Civil Society	Interpersonal safety and trust index (0-1)	0.50	0.48
Civil Society	Intergroup cohesion measure (0-1)	0.75	0.62
Civil Society	Level of gender equality (0-1)	0.89	0.77
Governance	Corruption and rule of law indicator (0-100)	0.71	0.54
Governance	Political Stability and Absence of Violence/Terrorism (-2.5 to 2.5)	0.51	0.94
Governance	Voice, accountability indicator (0-100)	0.84	1.03
Governance	Property Rights Index (0-100)	61.00	50.00
Education	School enrollment, tertiary (% gross)	68.11	70.80
Education	Years of schooling primary to tertiary (Years)	16.14	15.13
Education	Teacher-pupil ratio, primary	0.10	0.10
Education	Average of math and science score	1,005.90	1,002.87
Health	Life expectancy at birth, total (Years)	78.20	75.69

List of indicator Values for selected country

Health	Mortality rate, under age 5 (per 1,000 live births)	4.70	6.30
Health	Prevalence of HIV, total (% of population ages 15-49)	0.41	0.32
Health	Incidence of tuberculosis (per 100,000 people)	19.00	23.00
Health	Population either undernourished or obese (%)	25.60	17.97
Health	Immunization (% measles and DPT of children)	97.00	98.50
Health	Physician density (per 1,000 people)	2.27	2.14
Health	Hospital beds (per 1,000 people)	6.50	6.70
Environment	Air pollution, effects on humans (0-100)	70.7	72.8
Environment	Terrestrial and marine protected areas (% of total territorial area)	29.31	17.54
Environment	Carbon dioxide intensity (kg per kg of oil-equivalent energy use)	3.04	3.16
Environment	% of electricity generation from renewables (excluding hydro source)	12.69	4.17
Infrastructure	Internet users (per 100 people)	73.30	58.97
Infrastructure	Mobile cellular subscriptions (per 100 people)	146.21	117.32
Infrastructure	Quality of roads network (1-7)	4.10	2.06
Infrastructure	Quality of Railroads infrastructure (1-7)	3.60	2.89
Infrastructure	Improved water source (% of population with access)	98.30	97.50
Infrastructure	Improved sanitation facilities (% of population with access)	97.20	93.50
Infrastructure	Quality of Electricity Supply (1-7)	5.50	5.30
Equality	Inequality in education (%)	5.40	7.10
Equality	Inequality in life expectancy (%)	5.20	6.40
Income	GNI per capita, Atlas method (current US\$)	12,680.00	12,540.00
