Statement on principal adverse sustainability impacts of investment decisions3 at product level

Financial product Świat Inwestycji Premium II individual unit-linked life insurance

LEI 549300TNSHGVU2UXO005⁴

Summary

PZU Życie SA considers the material adverse sustainability impacts of its investment decisions at the level of its Świat Inwestycji Premium II individual unit-linked life insurance product.

This statement constitutes a statement on the principal adverse sustainability impacts resulting from PZU Życie SA's activities at product level. This is a unit-linked life insurance product.

This statement on the principal adverse sustainability impacts covers the reference period from 1 January 2024 to 31 December 2024.

The unit-linked insurance funds are invested in participation units and titles of mutual funds or in bank deposits.

In the process of selecting mutual funds, PZU Życie follows a policy of sustainable investing. In accordance with this policy, PZU Życie SA takes into consideration whether:

- the mutual fund management company (TFI) managing the fund takes into account the principal sustainability impacts of their investment decisions and whether it discloses or will disclose their scope in compliance with the Delegated Regulation,
- the mutual fund in question aims at sustainable investments or promotes sustainability aspects.

Being guided by the wording of the contracts of insurance as well as the policyholder's and the insured's interests, PZU Życie SA considers the above mentioned information when taking decisions on the selection of the mutual funds whose participation units and participation titles will be purchased for the unit-linked fund's assets collected under the unit-linked life insurance agreement, including other criteria of mutual fund evaluation.

PZU Życie SA outsourced to TFI PZU SA the management of unit-linked life insurance funds whose assets are invested in participation units or titles of various mutual funds (the so-called model funds). Being guided by the wording of the contracts of insurance, the policyholder's and the insured's interests, as well as considering the product's investment objectives, rules of asset investment diversification and other investment restrictions, the investment selection criteria and the adopted benchmarks and reference rates arising from the law, PZU Życie SA committed TFI PZU SA that when managing the portfolios of these unit-linked funds the company take into account the principal adverse sustainability impacts only when it does not negatively impact the expected rate of return on the product as well as the relation of the expected profit to the value of risk, except that the possibility to take into account the principal adverse sustainability impacts of investment decisions is limited or excluded in respect of products with defined investment policy.

In the life insurance agreement entered into with the unit-linked fund, the policyholder selects the unit-linked funds in which they wish to invest the funds from their insurance premium.

PZU Życie SA also publishes the principal adverse sustainability impacts in quantitative terms, so that the information is based on Annex I of the Delegated Regulation. This information is published below.

¹ Regulation (EU) 2019/2088 of the European Parliament and of the Council of 27 November 2019 on sustainability-related disclosures in the financial services sector 2 Commission Delegated Regulation (EU) 2022/1288 of 6 April 2022, supplementing Regulation (EU) 2019/2088 of the European Parliament and of the Council with regard to regulatory technical standards specifying the details of the content and presentation of the information in relation to the principle of 'do no significant harm', specifying the contents, methods and the form of presentation of the information in respect of sustainability indicators and adverse sustainability impacts, as well as specifying the contents, and the form of presentation of the information in respect of promoting the environmental or social aspects as well as sustainable investment objectives in the documents made available prior to the conclusion of the agreement, on Internet websites and in interim reports.

³ Pursuant to the SFDR, adverse sustainability impacts shall be understood as effects of investment decisions which have negative influence on aspects of sustainable development, i.e. the environmental, social and employee issues, issues related to the respect for human rights as well as combating of corruption and bribery 4 LEI for PZU Zycie SA

Description of the principal adverse sustainability impacts

A specific metric applied to assess each indicator of principal adverse impacts is given in the "Metric" column in each table, and the result of measurement is given in the "Impact" column. Some indicators of principal adverse impacts are calculated in absolute values and therefore they cannot change in time with changes in the values of investments of PZU Życie SA. Other indicators of principal adverse impacts are calculated in relative values and therefore they take into account changes in time in the relevant basis of calculations.

PZU Życie SA notes that not all of the companies in which the funds have been invested are required to prepare and publish data on the indicators of adverse sustainability impacts. Some of these companies publish such information on a voluntary basis. PZU Życie SA has not performed any data estimates in respect of the indicators for the companies that do not publish the data, because such estimates would not be reliable and could be misleading for customers.

In the "Explanation" column, it is indicated what percentage of the investment portfolio accounts for companies that have published a given indicator (assuming the look-through criterion referred to below). For indicators in which this percentage is low, the data published may not reliably reflect the principal adverse sustainability impacts of PZU Życie SA's operations. Data coverage percentages are given for all the investments of PZU Życie SA rather than a given asset class, which affects the level of presented indicators.

The unit-linked insurance funds are invested, among others, in participation units and titles of mutual funds. To calculate the indicators of principal adverse impacts on sustainability for individual investee companies, PZU Życie SA has used the look-through approach, i.e. it considered companies in mutual funds' portfolios proportionately to the value of the unit-linked fund investment into a given mutual fund.

PZU Życie SA notes that having applied the look-through criterion, as a financial market participant it displayed exposure to a large number of investee issuers, whereas for some issuers the share of instruments issued by the issuer in the financial products offered by PZU Życie SA (measured with the look-through criterion) was very low. PZU Życie SA assumed that the effect of adverse sustainability impacts for such issuers on the value of indicators describing the principal adverse sustainability impacts resulting from the activities of PZU Życie SA is insignificant and decided that it will not consider indicators applicable to the issuers in which PZU Życie SA's investment is below PLN 1 million (in terms of the look-through criterion). This cut-off point has been selected with the expert method, also taking into account the costs of obtaining market data. Upon application of this cut-off point, issuers whose indicators were considered account on average per annum for 99.5% of PZU Życie SA's financial product assets, whereas the indicators for companies accounting for the remaining 0.5% of PZU Życie SA's financial product assets have been disregarded.

Description of the strategy of identification and hierarchy ranking of principal sustainability impacts

For mutual funds whose units or titles are acquired to portfolios of unit-linked products, it is considered if the given fund aims at sustainable investments or promotes environmental or social aspects, the mutual fund management company takes into account the principal adverse sustainability impacts of their investment decisions and whether its discloses their scope in compliance with the Delegated Regulation.

As indicated above, being guided by the wording of the contracts of insurance, the policyholder's and the insured's interests as well as considering the product's investment objectives, rules of asset investment diversification and other investment restrictions, the investment selection criteria and the adopted benchmarks and reference rates arising from the law for selecting mutual funds the units and titles of which will be purchased as part of the investment of the unit-linked fund's collected under the Świat Inwestycji Premium II individual unit-linked life insurance agreement, PZU Życie SA takes into account the principal adverse sustainability impacts only when it does not negatively impact the expected rate of return on the product for the policyholder as well as the relation of the expected profit to the value of risk, except that the possibility to take into account the principal adverse sustainability impacts of investment decisions is limited or excluded in respect of products with a defined investment policy.

At present, PZU Życie SA's Świat Inwestycji Premium II individual unit-linked life insurance agreements that are currently in force do not envisage the objective of mitigating the principal adverse impacts of investments. Furthermore, PZU Życie SA discloses these principal adverse impacts of investments.

As a result, PZU Życie SA has not developed a strategy of identification and hierarchy ranking of principal adverse sustainability impacts for investment products offered by PZU Życie SA.

- a) date of the strategies' approval by the financial market participant's governance body

 Not applicable.
- b) division of responsibility for the implementation of these strategies in organizational strategies and procedures

 Not applicable.
- c) methods of selecting the indicators referred to in Article 6(1) points (a), (b) and (c) of the Delegated Regulation, as well as the identification and evaluation of the principal adverse impacts referred to in Article 6(1), and in particular an explanation of how these methods take into account the likelihood and severity of such principal adverse impacts, including their potentially irreversible character

methods of selecting the indicators referred to in Article 6(1) points (a), (b) and (c) of the Delegated Regulation

The indicators referred to in Article 6(1)(a) of the Delegated Regulation are the indicators given in Table 2 of Annex I to the Delegated Regulation. These are additional climate-related indicators and other environmental indicators.

Among these indicators, PZU Życie SA, using the expert method on the basis of the arguments presented below, has chosen indicator no. 17 "Share of bonds not issued based on the EU regulations on environmentally sustainable bonds." PZU Życie SA believes that it is an unambiguous indicator, because such bonds can be identified in unequivocal and undisputed manner. Furthermore, the indicator covers important aspects given the impact of green securities on sustainability. Therefore, it represents important information weight for policyholders who have entered into an insurance agreement. In addition, it is a comprehensive factor, rather than one focusing on one section of activities only. In addition, data for the publication of the indicator are easily available.

The indicators referred to in Article 6(1)(a) of the Delegated Regulation are the indicators given in Table 3 of Annex I to the Delegated Regulation. These are additional indicators in respect of social and employee matters, respect for human rights and combating corruption and bribery.

Among these indicators, PZU Życie SA, using the expert method on the basis of the arguments presented below, has chosen indicator no. 22 "Investments in jurisdictions listed in the EU's list of non-cooperative tax jurisdictions". PZU Życie SA believes that this indicator is unambiguous because investments in such jurisdictions can be identified in unequivocal and undisputed manner. Furthermore, the indicator covers important aspects given the very adverse impact of investments in such jurisdictions. Therefore, it represents important information weight for the policyholders. In addition, it is a comprehensive factor, rather than one focusing on one section of activities only. In addition, data for the publication of the indicator are easily available.

The indicators referred to in Article 6(1) point (c) of the Delegated Regulation are potential other indicators. As has been mentioned above, PZU Życie SA does not apply any other adverse sustainability impacts in order to identify and evaluate additional principal adverse impacts for a given sustainability factor.

methods of defining and assessing principal adverse impacts as referred to in Article 6(1) of the Delegated

Regulation

PZU Życie SA does not apply methods of defining and assessing principal adverse impacts referred to in Article 6(1) of the Delegated Regulation, and therefore it is impossible to provide an explanation of how these methods take into account the likelihood and severity of such principal adverse impacts, including their potentially irreversible character.

d) each margin of error linked to application of the methods referred to in this section in letter (c), including an explanation of the margin of error

Methods and processes for determining and monitoring principal adverse impacts depend on data accessibility and the data may be of less than optimum quality. Precise calculation of indicators of principal adverse impacts in investment portfolios requires secured high quality data for reference investee companies. Although many companies measure metrics relevant for calculating indicators of principal adverse impacts and publish reports of such data, discrepancies in reporting systems and disclosures used by various issuers in various sectors and countries result in incoherent accessibility of the required indicators. When estimates are made by a data provider, estimated data may reduce the reliability of the indicators, as they may not accurately reflect the actual impact of the given company.

The approach taken by PZU Życie SA to calculate principal adverse impacts assumes that they should be based on the most recent available information on the impacts of investments, but most of the information used to determine principal adverse impacts is based on historical data, taking into account the timing of disclosure by investee companies and consideration by third-party data providers.

e) data sources used

PZU Życie SA obtains data applicable to companies and countries in which investments have been made from a third-party independent data provider, Bloomberg. The data include data published by issuers and, in relevant cases, data estimated by an external data provider.

The unit-linked insurance funds are invested in participation units and titles of mutual funds. To calculate the indicators of principal adverse impacts on sustainability for individual investee companies, PZU Życie SA has used the look-through approach, i.e. it considered companies in mutual funds' portfolios proportionately to the value of the unit-linked fund investment into a given mutual fund.

Engagement Policy

a) brief summary of the engagement policy, referred to in Article 3(g) of Directive 2007/36/EC of the European Parliament and of the Council

Not applicable.

adverse impacts indicators considered in the engagement policy

Not applicable.

information regarding how the engagement policy will be adapted if the principal adverse impacts have not been reduced over a time longer than one reporting period

Not applicable.

b) brief summary of any other engagement policy to reduce principal adverse impacts

Not applicable.

References to international standards

In this section, PZU Życie SA discloses whether and to what extent it observes corporate social responsibility codes as well as internationally recognized standards of due diligence and reporting. Furthermore, PZU Życie SA discloses in the relevant cases to what degree it has complied with the goals of the Paris Agreement.

PZU Życie SA considers the principal adverse impacts for sustainability factors: (10) Violations of UN Global Compact principles or Organization for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises and (11) No processes or mechanisms to monitor compliance with Global Compact principles and the OECD Guidelines for Multinational Enterprises, in quantitative terms, that is, it publishes

Apart from the principal adverse impacts on sustainability factors, PZU Życie SA does not apply international standards in the context of

principal adverse sustainability impacts of investment decisions in respect of products.

a) information on the indicators used to consider the principal adverse sustainability impacts as referred to in Article 6 sec. 1 of the Delegated Regulation, by means of which the degree of compliance with the said code or alignment with the said objectives referred to above is measured

Not applicable.

b) information on the method and data used to measure the degree of compliance with the said code or alignment with the said objectives referred to above, including a description of the scope of application, data sources and how the method forecasts the principal adverse impacts of the investee companies' operations

Not applicable.

c) information on whether forward-looking climate scenarios are used and, if so, the name and provider of the scenario and when it was developed

Not applicable.

d) if a forward-looking climate scenario is not used – an explanation of why the financial market participant considers forward-looking climate scenarios relevant

Not applicable.

Comparison with historical data

A number of factors affect changes of indicators of principal adverse impacts in time.

Figures may differ in any period as a result of changes in the values of assets of the financial market participant, changes to the composition of the investment portfolio and in connection with the market circumstances which affect the assets and asset weights in the investment portfolio. What also affects changes in the indicators are changes in the market between two reference periods as well as extension or limitation of the scope of data presented by the issuers, which is shown by data coverage percentages.

Data from third-party providers are updated periodically, often to reflect more recent data or estimates of investee companies. There are also situations where data are deleted because they have been identified as incorrect or inaccurate. For indicators concerning topics for which impact data are just beginning to become available, these updates can result in significantly different impact data for a given company.

Some indicators refer to the company's total enterprise value, so fluctuations in the company's enterprise value may also cause changes in the share of principal adverse impacts, even if investments in the company have not changed.

Variability in the coverage of data available for a given indicator of principal adverse impacts may affect the reported value as relevant data appear or disappear for a given investment. The coverage may also be affected by changes in data availability from third-party data providers or changes in the portfolio. Where the coverage is low, these changes may have a more noticeable impact on the reported value of the indicator.
